MAJOR CURRENT RESEARCH:

- “Drug Use and HIV Risk among Youth,” research on extent and social distribution of high-risk behaviors, sexually-transmitted diseases, and HIV among a probability sample of 18—24 year old youth in a high-risk neighborhood.
- “Networks, Norms, and HIV/STI Risk among Youth,” a study of how network and normative factors are related to infection probabilities and behaviors among young adults in a high-risk neighborhood.
- “Local Context, Social Control Action, and HIV Risk,” a study of how to measure neighborhood-based and family-based social control actions and norms that may affect HIV risk.
- “HIV Risk among Women IDUs Who Have Sex with Women,” ongoing ethnographic project to study the social worlds of drug-injecting women who have sex with women, why these women are at particularly high risk for HIV infection, and how to reduce HIV transmission among them
- “Community Vulnerability and Response to IDU-Related HIV,” a comparative study of the extent and predictors of drug injection in metropolitan populations in the USA; of HIV prevalence and

incidence among drug injectors in these metropolitan areas; and of public health and other programs that respond to these.

- International collaborative research with participants in the WHO-sponsored multi-city project on HIV and risk behaviors among drug injectors.
- Development of social and other indicators for use in HIV epidemiology and prevention research (through the Methods Development Core of the Center for Drug Use and HIV Research).
- "Risk Factors for AIDS among Intravenous Drug Users," ongoing epidemiologic study (with Don C. Des Jarlais).
- "HIV Risk and Transitions from Non-Injecting Heroin Use," ongoing longitudinal study (with Alan Neaigus).
- Collaborative research on the evaluation of syringe exchange projects in cities in the United States.
